Height: 12 inches

Spread: 24 inches

Sunlight: ○ ◐

Hardiness Zone: 4a

Other Names: Ornamental and Edible Everbearing Strawberry

Description:

This variety combines showy flowers with delicious fruit; produces very attractive, ruby red flowers, followed by medium sized fruit all summer long; vigorous, with good disease resistance

Edible Qualities

Ruby Ann Strawberry is a perennial that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces red heart-shaped berries which are usually ready for picking from early to late summer. This variety is considered an everbearing type of strawberry, which means that it will repeatedly produce fruit across most of the season. The berries have a sweet taste and a firm texture.

The berries are most often used in the following ways:

- Fresh Eating
- Baking
- Preserves

Features & Attributes

Ruby Ann Strawberry features showy ruby-red cup-shaped flowers with lemon yellow eyes along the stems from early to late summer. Its serrated round compound leaves remain forest green in color throughout the season. It features an abundance of magnificent red berries from early to late summer.

This is an open herbaceous perennial with a spreading, ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and should not require much pruning, except when necessary, such as to remove dieback. It is a good choice for attracting birds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Aside from its primary use as an edible, Ruby Ann Strawberry is sutiable for the following landscape applications;

- Border Edging
- General Garden Use
- Groundcover
- Container Planting
- Hanging Baskets

Planting & Growing

Ruby Ann Strawberry will grow to be about 10 inches tall at maturity, with a spread of 24 inches. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen! This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This plant is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated edibles garden. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is particular about its soil conditions, with a strong preference for rich, alkaline soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in both summer and winter to conserve soil moisture and protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Ruby Ann Strawberry is a good choice for the edible garden, but it is also well-suited for use in outdoor containers and hanging baskets. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
