

Chrysler Imperial Rose

Rosa 'Chrysler Imperial'

Height: 5 feet

Spread: 4 feet

Sunlight:

Hardiness Zone: 5b

Group/Class: Hybrid Tea Rose

Description:

A sensation when it was introduced in 1952 and remains one of the best hybrid teas; blooms profusely in early summer and then steadily throughout the season; the deep red blooms are very full and have a lovely scent; prefers a warm and dry climate

Ornamental Features

Chrysler Imperial Rose features showy lightly-scented double red flowers at the ends of the branches from late spring to early fall. The flowers are excellent for cutting. It has green deciduous foliage. The oval compound leaves do not develop any appreciable fall color.

Landscape Attributes

Chrysler Imperial Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Chrysler Imperial Rose is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Chrysler Imperial Rose will grow to be about 5 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
